M. splicing variant of the RON transcript induces constitutive tyrosine kinase activity and an invasive phenotype.";
Mol. Cell. Biol. 16:5518-5526(1996).

novel putative receptor protein tyrosine kinase of the met

Oncogene 8:1195-1202(1993)

-! - FUNCTION: RECEPTOR FOR MACROPHAGE STIMULATING PROTEIN (MSP). HAS

TYROSINE-PROTEIN KINASE ACTIVITY.

tyrosine phosphate.
-!- SUBGUNT: HETERODIMER FORMED OF AN ALPHA CHAIN AND A BETA
-:- SUBGUNT: HETERODIMER FORMED LINKED.
-!- SUBCELLULAR LOCATION: Type I membrane protein.
-!- ALTERNATIVE PRODUCTS: 2 ISOFORMS; RON (SHOWN HERE) AND DELTA-RON;
-!- ALTERNATIVE SPLICING. DELTA-RON LACKS PART OF THE
EXTRACELLULAR DOMAIN, OLIGOMERIZES AND IS CONSTITUTIVELY

CACTS WITH GIPC PDZ DOMAIN.

CATION: Type I membrane protein.

STAGE: EXPRESSED FROM DAY 10 IN THE EMBRYO. LOW BITWEEN DAYS 10-12. EXPRESSION PEAKS ON DAY 13 WITH STRUMEN THEN UNTIL BIRTH.

LIONGS TO THE SEMAPHORIN FAMILY.

NYAMINS I SEMA DOMAIN.

NYAMINS I IMMUNOGLOBULIN-LIKE C2-TYPE DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          oglobulin domain, Multigene family, Neurogenesis, n; Glycoprotein.

Submitted (APR-1998) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: MAY ACT AS POSITIVE AXONAL GUIDANCE CUES.
-!- SUBCELLULAR LOCATION: Type I membrane protein.
-!- SIMILARITY: BELONGS TO THE SEMAPHORIN FAMILY.
-!- SIMILARITY: CONTAINS 1 SEMA DOMAIN.
-!- SIMILARITY: CONTAINS 7 TSP TYPE-1 DOMAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SEMAPHORIN 5A.

                                                                                                  Genomics 73:343-340(2001).

-I- FUNCTION: MAY PLAY A ROLE IN BOTH PERIPHERAL AND CENTRAL NERVOUS SYSTEM DEVELOPMENT (BY SIMILARITY).

-I- SUBCELLULAR LOCATION: Type I membrane protein.

-I- ALTERNATIVE PRODUCTS: At least 2 isoforms; 1 (shown here) and 2/6B.1; are produced by alternative splicing.

-I- SIMILARITY: BELONGS TO THE SEMAPHORIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        --ERTGHIYLGAVNRIYKL-----SSDLKV--LVTHETGPDEDNPKCYPPRIVQTCNEP
